

Angular observables

GFT INTERNAL TRAINING

INNOVATE. TRANSFORM. DELIVER.

Agenda

1.intro

2.some useful functions

3.observables

4.learning resources

intro

Observables

- isn't an Angular specific feature, but rather a proposed standard for managing async data that will be included in future javascript versions (hopefully)
- open up a continuous channel of communication in which multiple values of data can be emitted over time
- are a pattern of dealing with data by using array-like operations to parse, modify and maintain data
- Angular uses them extensively - you'll see them in the HTTP service and the event system

RxJS

Being Reactive, my friend

<http://reactivex.io>

<http://reactivex.io/rxjs/>

Some useful functions

map

```
a = [1, 2, 3, 4]
```

```
► (4) [1, 2, 3, 4]
```

```
a.map( x => 3*x )
```

```
► (4) [3, 6, 9, 12]
```

```
a
```

```
► (4) [1, 2, 3, 4]
```

filter

```
a = [1, 2, 3, 4]
```

```
► (4) [1, 2, 3, 4]
```

```
a.filter( x => x>1 )
```

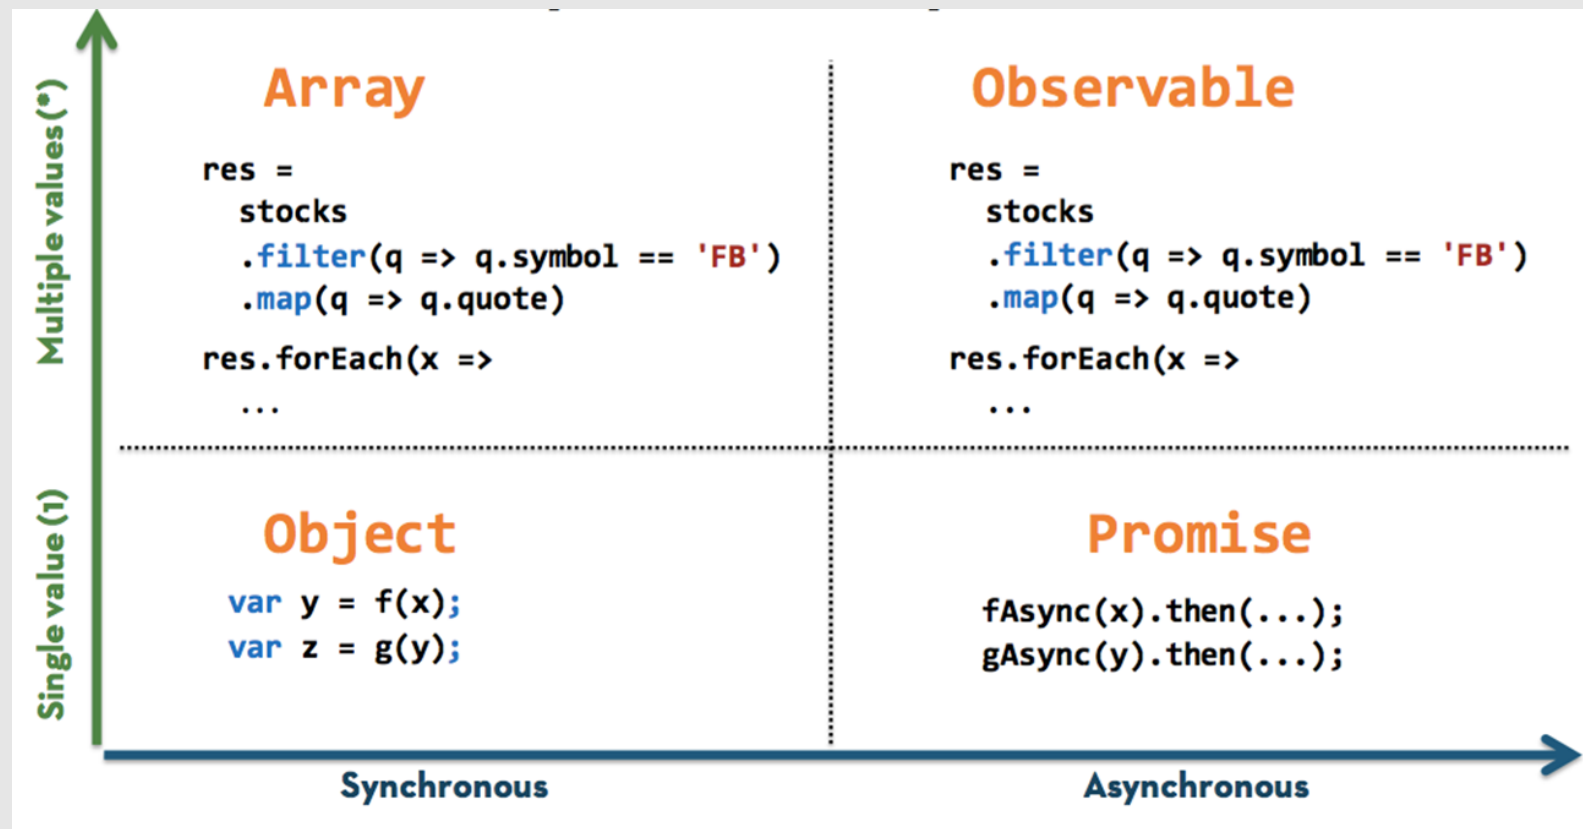

```
► (3) [2, 3, 4]
```

```
a
```

```
► (4) [1, 2, 3, 4]
```

Observables

Observable === Collection + Time

<http://jonalvarezz.github.io/presentation-reactive-programming/#29>

Observables can model

- events
- async server requests
- animations

Adapt Push APIs to Observable

DOM Events

Websockets

Server-sent Events

Node Streams

Service Workers

jQuery Events

XMLHttpRequest

setInterval

→ Observable

The diagram consists of a vertical list of eight APIs on the left: DOM Events, Websockets, Server-sent Events, Node Streams, Service Workers, jQuery Events, XMLHttpRequest, and setInterval. To the right of this list is a vertical line with horizontal tick marks aligned with each API name. An arrow points from the middle of this vertical line to the word 'Observable'.

promises vs observables

Promises

- Handles a single event when an *async* operation completes or fails
- Returns a single value
- Supported in ES6

Observables

- Handles a stream (zero or more than zero events)
- Offers the features provided by promises and more
- They are cancellable
- They have useful operators like map, reduce, retry...

observer

```
observable.subscribe(  
  //new data  
  data => console.log(data),  
  //error  
  error => console.log(data),  
  //completed  
  console.log ("done");  
);
```

optional

optional

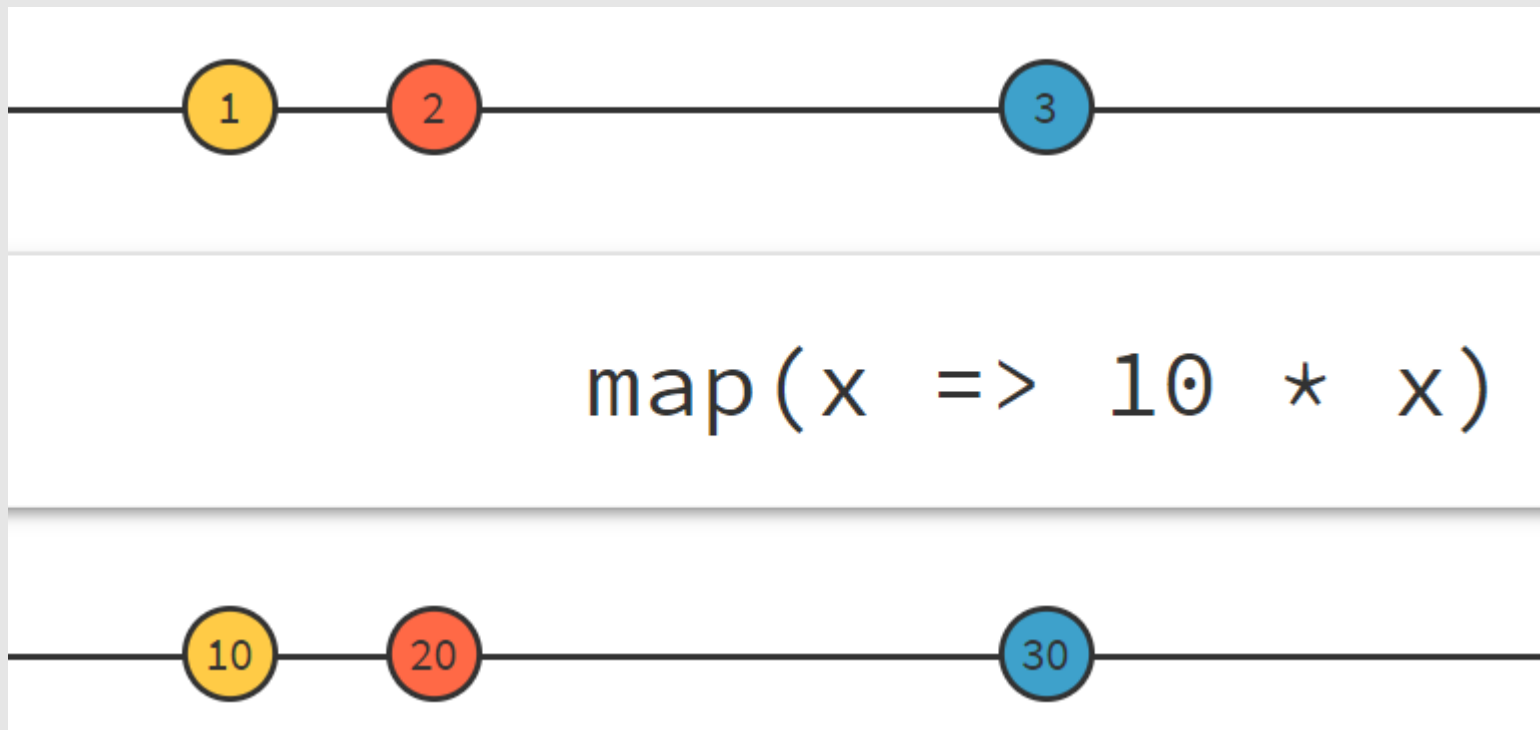

<http://reactivex.io/rxjs/class/es6/MiscJSDoc.js~ObserverDoc.html>

Observables are cancellables

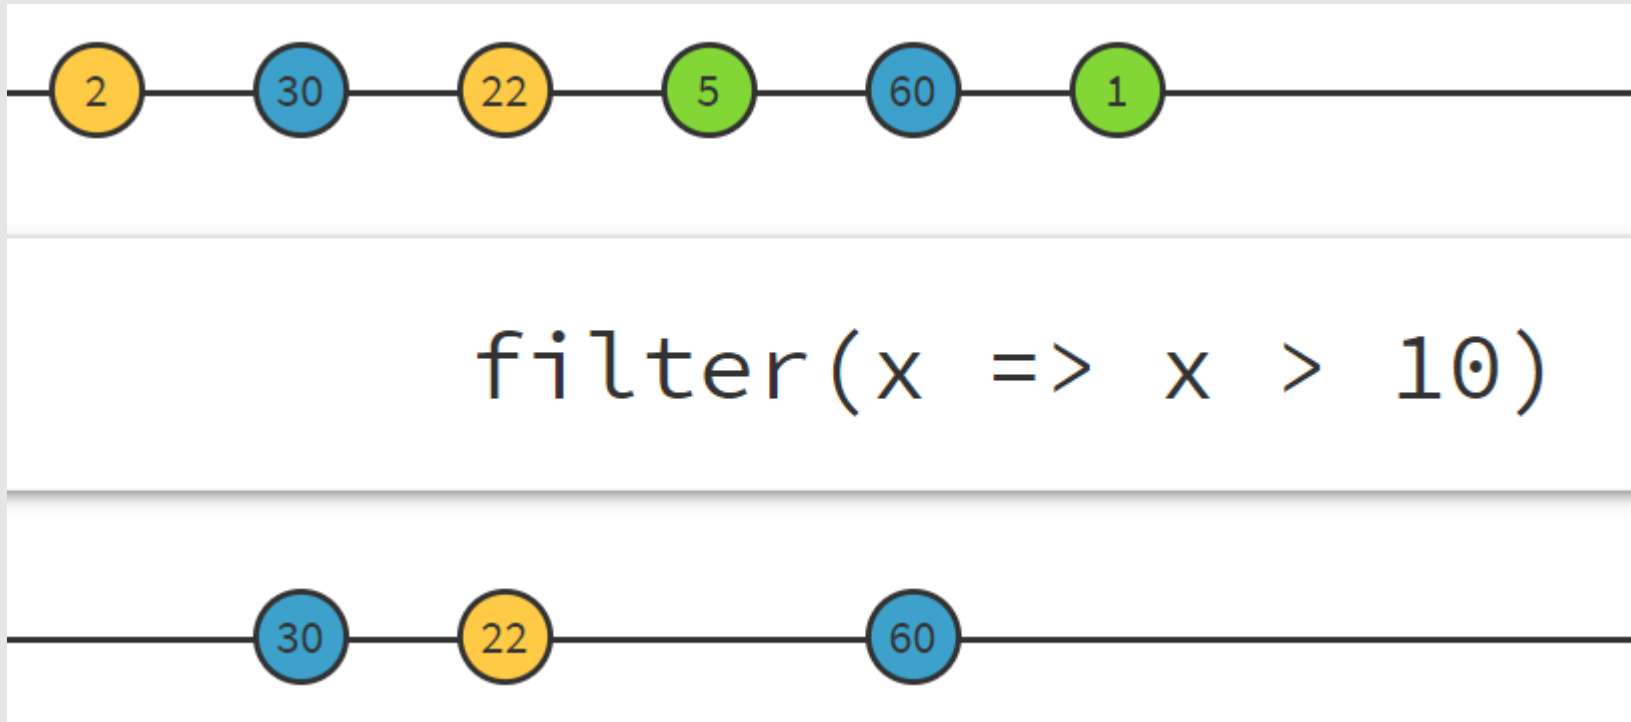

```
let subscription = observable.subscribe(  
    //observer  
);
```

```
subscription.unsubscribe
```

Observables have cool functions

Observables have cool functions

Observables have lots of them
